Local energy efficiency and renewable energy

Project idea is to develop local use and production of renewable energy and enhancing the energy efficiency to the next level.

Aim is to guide local communities, households and businesses to increase their energy efficiency and the use of renewable energy sources. The aim is also to support local renewable and sustainable energy production by exchange and accumulating information.

Creating a network of rural energy knowhow centres, the target is to increase the transnational cooperation between the businesses and their sub-contractors and stakeholders.

Keywords: renewable energy, energy efficiency, local energy production

This project proposal is prepared with energy agency Thermopolis:
