Kansainvälistymispolku – Path to Europe

LOOKING FOR INTERNATIONAL PARTNERS

Straw skills to South Western part of Finland

Organisation: Pro Agria Satakunta association / Pro Agria Farma association

Contact person: Jukka Kontulainen

e-mail: jukka.kontulainen@proagria.fi

A brief description of the idea:

Straw is still very scarcely used material in Finland, all thought elsewhere in Europe it's used very commonly for heating and also at constructing buildings. Straw however has a great potential in South Western part of Finland. The Projects main objective is to promote use of straw as a source of energy in countryside and as a material in rural building construction. In addition, the project aims to launch entrepreneurship to enhance the use of straw.

The aim is to

- Build a straw building as a result of this project
- Collection and documentation of additional data, such as the model of producing local heating by the means of burning straw.
- Promote the establishing of 3-5 straw heated units to projects operation area
- Reducing the use of fossil fuels,

What kind of joint action could be developed:

Exchange of experiences about the use of straw between the different regions. To define the costs of using straw, as an alternative material for heating and construction. To construct a building using straw as a material.

Keywords

Straw, heating, construction, straw building, straw fuel, close-up heat, renewable energy.

Target audience

LAGs, all those interested in the same subject, straw builders, straw heaters
